FIG. 11

LOG OF DRILL HOLE SW 9
WADI SAWAWIN
(JGS-4-1)

1970

Log work by O. Hirokawa

Scale (meter)	Date	Depth (meter)	Casing	Bit	Water return	Checking: Direction	Checking: Inclination (from Vertical)	Core recovery %	Core recovery Diagram	Angle of bedding with drill axis	Log	Depth (meter)	Lithology & mineralization
0	9-28	1.54											
2													
4								90					Diabasic rock
6	9-29			BXM	20%	S							
8													
10								100				10.55	
12	9-30	11.90 / 12.34						98		70°			
14													
16	10-1							79		60°		16.15 / 16.65	Jaspilite
18													
20		19.84											Alternation of tuffaceous sandstone and jaspilite seams
22										58°			
24	10-2							100					
26							30°			58°		24.55	
28		27.55						87					
30				BQ						56°			Jaspilite
32	10-4							77		56°			
34		34.56										34.60	
36										55°			Jaspilite intercalating thin irregular calcareous parts
38												37.65 / 38.38	Tuffaceous slate
40	10-5							87					Massive basic rock
42												42.51	
44		43.38								50°		44.80	Jaspilite interbedding slate
46	10-6							49		60°			
48					30%								Jaspilite
50		50.32					32°			58°			
52	10-7							71		66°			
54		54.50								62°			
56												55.60 / 56.07	
58	10-8							88		60°			Jaspilite cut by irregular thin veins
60													
62		61.00										61.00	
64	10-9												
66		66.11						50		40°			Jaspilite with thin seams of greenish tuffaceous slate sandstone
68	10-11									75°			
70		70.53										71.00	
72										58°		71.10 / 72.96	Tuffaceous slate sandstone with thin seams of iron ore
74	10-12							82					
76		75.64					34°			48°			Jaspilite
78	10-13							72		45°			
80		78.71										78.70	Alternation of tuffaceous slate sandstone and minor iron layer
82	10-14							77		52°		80.70 / 82.30	Jaspilite
84		82.93											
86	10-15							61		60°			Jaspilite with greenish slate
88		88.61		AQ						35°		86.70	Light brownish or greenish tuffaceous slate
90													
92	10-16							66				91.00	
94		94.93											Jaspilite
96													
98	10-18							75		42°		97.00	
100		100.45					35°						
102													Tuffaceous slate with iron ore
104	10-19				40%			48					
106		106.42										107.21	
108										40°			Jaspilite with irregular calcareous parts
110	10-20							67		55°		109.28	
112		111.39			50%								
114	10-21							14					Brownish and light greenish low-grade iron ore
116													
118		118.48										118.48 / 119.47	
120													
122	10-22							79					
124							37°						
126		126.04											
128													Greenish massive basic rock
130	10-23							69					
132													
134		133.67			40%								
136	10-25							84					
138												137.10	
140		139.36								70°			
142	10-26							51					Jaspilite with irregular reddish brown and white thin layers
144		142.90								60°			
146	10-27							72				146.43 / 146.93	
148		147.97											
150							41°						
152	10-28							62		60°			Irregularly bedded slaty tuffaceous rock with iron ore
154		152.89											
156	10-29							61					
158		158.16										157.81 / 158.63	Slate
160	10-30							90		60°		159.87	Jaspilite
		160.47								70°		161.20 / 161.70	Slate
162	11-1							47					
164		165.10											Jaspilite cut by irregular white thin vein
166					50%								
168	11-2							11				168.48	
170													
172													Tuffaceous (?) Slate
174		174.02											
176													
178	11-3							0.41					
180													
182		181.31										181.31	

Core Samples

Reference number	Depth (meter)	Fe %	SiO_2 %	P_2O_5 %	Remarks
